

The background of the slide is a photograph of a stone wall with the Carnegie Mellon University name and logo. The wall is made of rough-hewn, light-colored stone. The name 'CARNEGIE MELLON UN' is mounted on the wall in large, dark, three-dimensional block letters. To the left of the text is a circular logo. The background is slightly out of focus, showing greenery and a building in the distance.

“My heart is in the work.”

Andrew Carnegie, Founder
November 15, 1900

Carnegie Mellon University

The Wilton E. Scott Institute for Energy Innovation works across the academic units and colleges of Carnegie Mellon University to uncover solutions for the world's energy challenges through collaborative research, strategic partnerships, public policy, outreach, and education.

Carnegie Mellon University

Sherman & Joyce Bowie Scott Hall

- 107,000 sq ft building, opened on April 30, 2016
- Pursuing LEED Gold certification with one of the largest green roofs in Pittsburgh (19,500 sq ft)
- 14,000 sq ft world class micro/nano fabrication facility
- 8,500 sq ft Eden Hall Foundation Cleanroom is 30-40% more energy efficient than similar size Class 10/100 facilities
- EMI-shielded rooms allow the new Elionix electron beam lithography system to push the fundamental limits of nanoscale lithography
- 19 state-of-the-art wet chemistry decks with vastly improved Nanofab processing capability
- Only university lab worldwide with both iLab and oLab GVD Corporation chemical vapor deposition systems for polymers

Strategic Priorities for the Institute

- New Materials
- Smart Grid
- Building Efficiency
- Pathways to a Low-Carbon Future
 - Benefit and cost analysis of southwestern Pennsylvania region
 - Carbon Intensity Index
- Commercialization and start ups

CMU's core strengths

- Optimization as a core strength
- Systems approach to problem solving and design
- Interdisciplinary collaboration
- Innovative and entrepreneurial faculty, staff and community
- Proximity to start-up epicenter

Convergence of energy across the campus

A watercolor-style illustration of a city street scene. The scene is viewed from an elevated perspective, looking down a street lined with multi-story buildings. The buildings are rendered in soft, muted colors like yellows, greens, and blues. In the foreground, there are several cars in various colors (blue, green, yellow) and pedestrians walking on the sidewalks. The overall atmosphere is bright and airy, with a soft, painterly texture. The text is overlaid on a semi-transparent white box in the upper half of the image.

Pittsburgh has become a **hub for innovation** with intelligent planning, strong partnerships, and innovative thought leaders.

Universities play a growing and central role in the **smart cities innovation ecosystem**, driving regional and national economic growth.

Industry Partnerships

More than 350 of the world's most innovative companies have partnered with CMU.

The Age of Urbanization

- In 2008, for the first time in history, more human beings lived in cities than in rural areas. By 2050, nearly 2/3 of the world's projected 9.7B population will live in urban areas.
- Over the last decade, the global urban population has been rising by an average of 65M per year, equivalent to adding seven Chicago every year.
- In China alone, 300M people are expected to move to urban areas over the next 15 years.
- Half of global GDP growth between 2010 and 2025 will come from 440 cities in emerging market; 50% of urbanization involves cities with less than 500K population.
- Cities tend to display greater network effects: with every doubling of a city's population, each inhabitant becomes 15% wealthier, more productive and more innovative.
- Growth of innovation districts, mixed-use spaces, and urban talent pool

In this century, cities will account for

90% of population growth

80% of global CO2

75% of energy use

Environmental impact

Rising levels of pollution

Increased congestion

Sustainability of natural resources

Increased crime rates

Efficient delivery of city services

Massive infrastructure investment requirements (\$10Trillion by 2025)

Performance Measures

Pittsburgh's EcoInnovation District

Mayor's Goal: 2nd Ave = Electric Avenue

Maximize parking facilities potential for energy efficiency, generation, storage and charging

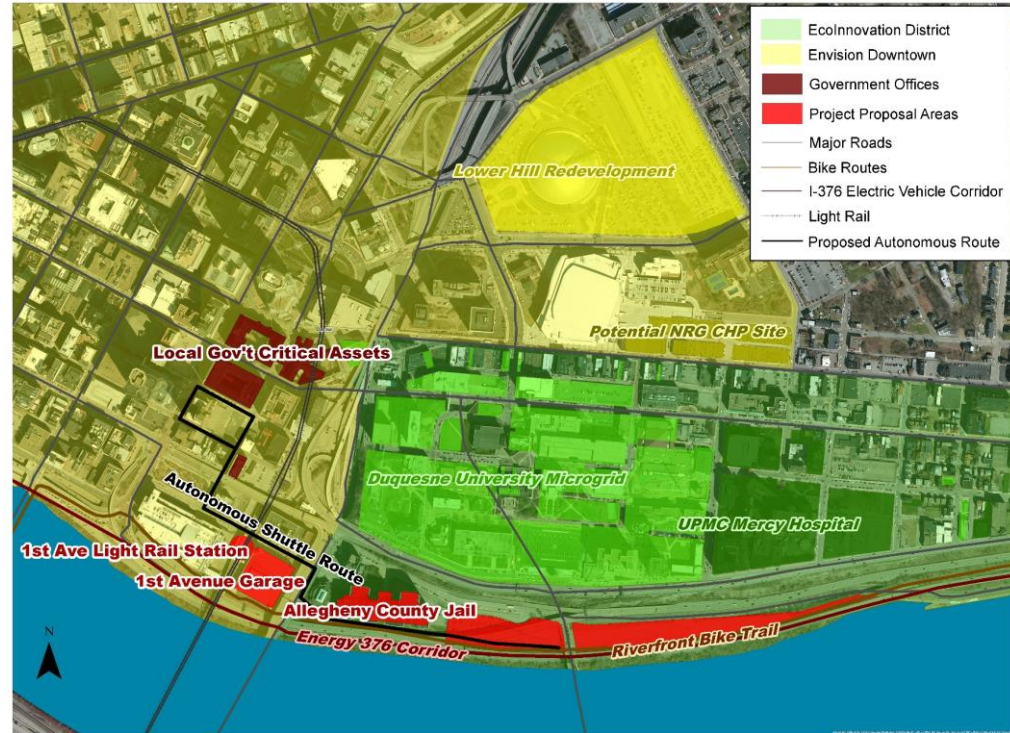

- LED Lighting retrofit with controls demonstrating 64% savings
- Revolving Funding

100% Fossil Free Fleet by 2030

- Permits, Licensing and Inspections fleet
- Fleet of 50 vehicles, currently Ford Foci
- Used for short trips
- Non-emergency vehicles
- Leverage assets with Pittsburgh Parking Authority

100% Renewable Energy Purchase or Production by 2030

- 50 electric vehicles (Nissan Leaves)
- 25 Level 2 chargers
- Requires a 100kW system- solar, wind
- Backup battery storage and grid connection for redundancy
- Public access to chargers - Energy 376 Corridor with PRCC

Local gov supports innovation & partnership

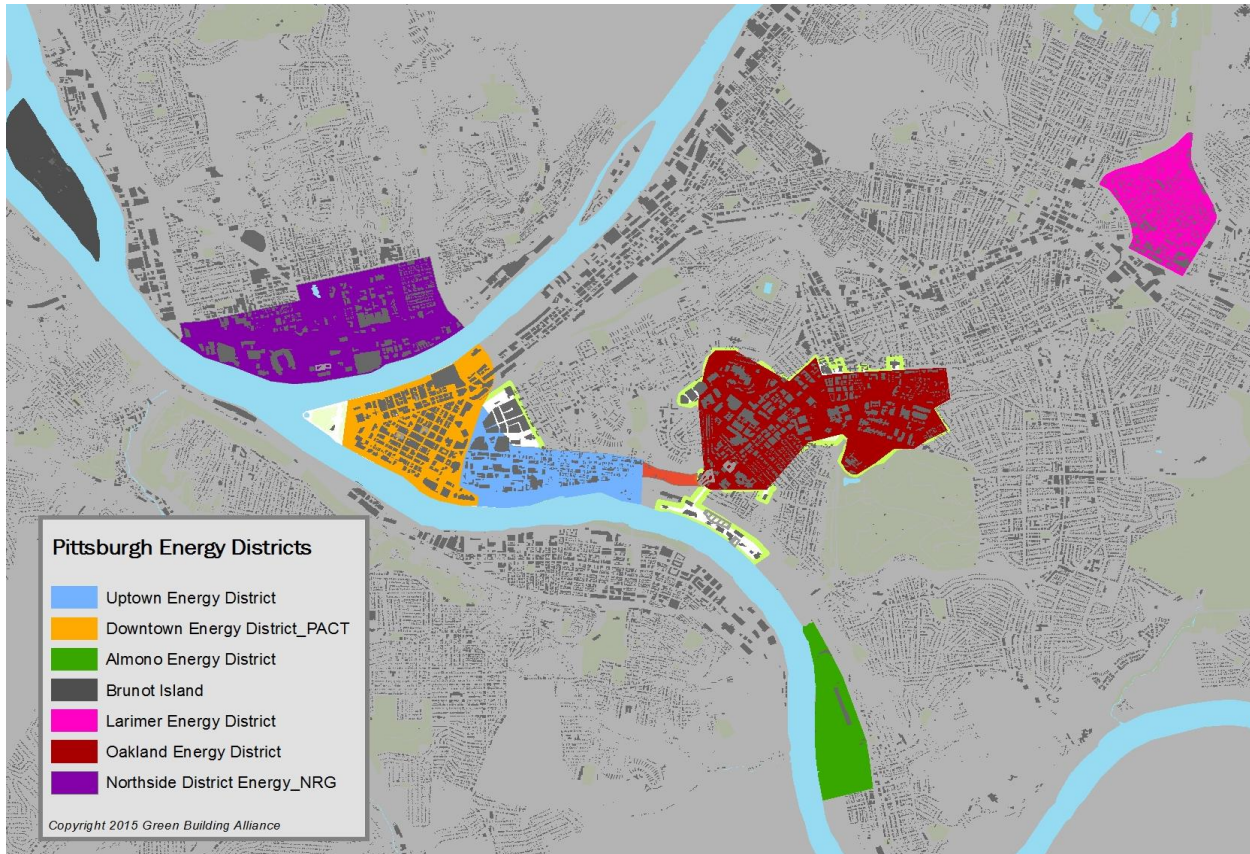

Memorandum of Understanding
Between
Carnegie Mellon University
Metro21 Initiative
and
The Honorable Mayor of the City of Pittsburgh

This Memorandum of Understanding (MOU) sets forth the terms and understandings between the named parties to pursue their mutual interest to research, develop, deploy and evaluate technology and analytically based solutions to the problems facing the systems and infrastructure that serve the quality of life and economy of the City of Pittsburgh and other communities, cities, counties and metropolises around the globe.

Pittsburgh Climate Action Plan 3.0

- Buildings
- Utilities & Systems
- Transportation & Mobile Sources
- Consumption & Resource Recovery
- Food & Agriculture
- Urban Forest, Natural Systems and Carbon Sequestration
- Local Government Operations
- Adaptation
- Community Outreach & Education

District Energy Infrastructure & Capacity

District Energy Planning

Pittsburgh North Shore (NRG Energy)

- 50 year CW/steam/hot water system
- Regulated utility
- 35 customer buildings

Golden Triangle (PACT)

- 100 year steam system
- City/County Co-op
- NRG Advisory Services is assisting owner on modernizing system
- 55 customer buildings

Uptown (NRG Energy)

- In service early 2018 (planned)
- CW/steam/hot water system
- SEA Lower Hill development site
- UPMC Mercy is anchor customer

North Shore, Golden Triangle & Uptown

Uptown District Energy Center

North Shore – Clear Day
7/4/2014; 11:29AM

Air Quality Index : Good
PM_{2.5} Level : 4 µg/m³
Relative Humidity : Approx. 40%

North Shore – “Brown Cloud” Day
4/6/2014; 9:11AM

Air Quality Index : Moderate
PM_{2.5} Level : 24 µg/m³
Relative Humidity : Approx. 47%

Confluence of 3 Trends + Emergence of Cities as Living Laboratories

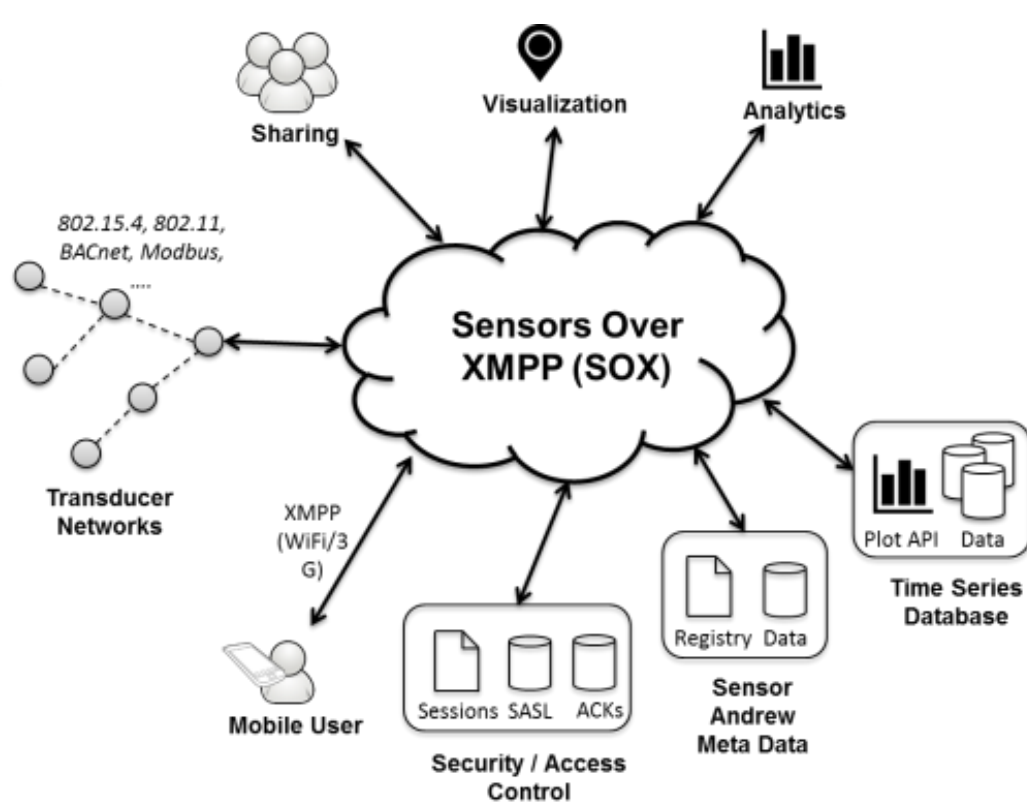

1. The age of urbanization and emergence of cities as living laboratories
2. Changing demographics – graying human population and shrinking labor force
3. The acceleration in the scope, scale, ubiquity, and economic impact of technology

If You Smell Something, Say Something: CMU Launches Mobile App Smell PGH

September 29, 2016

By Adam Shuck

Pittsburgh ranks high on lifestyle and food magazine lists, but a recent report from the American Lung Association found the region is in an unenviable 8th place for annual particle pollution, the worst of any metropolitan area outside of California. Pittsburgh's air quality is not great. And, like residents reporting noxious, throat-burning fumes from neighborhood industrial sites, you might even say it stinks.

Carnegie Mellon University

Transportation

Energy Systems

Health and Medical Care

Critical Infrastructure

Industrial Automation

Smart Systems: Sensing, Reasoning and Data-driven Decision Making

- **Cyber-Physical Systems** aim to deeply integrate computation, communication and control into physical systems
- **Smart everything...** buildings, infrastructure, transportation, cities, health care delivery, energy, environment
- Systems that **adapt, learn and respond**
- **Dependable operation** with high assurance of reliability, safety, security and usability

Are We at an Inflection Point?

In the last 10 years alone, we have seen extraordinary advances ...

- Self-serving cars
- Complex communication
- Natural language understanding
- Face recognition
- Language translation
- Watson and Jeopardy
- 3D printing and additive manufacturing
- Advanced robotics
- ...

Imagine a Day...

By coupling roadway sensors, traffic cameras and individuals' GPS devices, we can **reduce traffic congestion** and generate significant **savings in time and fuel costs.**

Imagine a Day...

By accurately predicting natural disasters such as hurricanes and tornadoes, we can **employ life-saving and preventative measures** that mitigate their potential impact.

Imagine a Day...

By correlating disparate data streams through text mining, image analysis and face recognition, we can **enhance public safety.**

Imagine a Day...

Static infrastructures, such as buildings and bridges, are transformed into **smart, safe and sustainable spaces** that adapt to consumption, growth and changing environmental needs.
