April 2011
BC’s Comprehensive Approach to Larger Targets

• BC Hydro mandated to **meet at least 66%** of future load growth with DSM by 2020.

• Current plan targets over **75%** of future load growth.

• One innovative approach is through Conservation rate structures which make up **~ 20%** of savings in 2020.

---

**Conservation Rate Structures**

- Residential rate
- Large Commercial/small industrial rate
- Large Industrial rate
Large Commercial Rate

Planning and Policy Considerations:
• Integration between estimates of Program and Rate structure savings in DSM planning
• Attribution of savings between Rate and Program
