

Opportunities to Provide Home Energy Services with New Health Funding in Michigan

Health care professionals recognize that avoiding a health harm is preferable to treating an illness or injury after it has occurred. Energy efficiency programs provide an opportunity to deliver these preventive strategies in homes. This fact sheet provides information on several opportunities for health sector funding to be used in support of in-home energy efficiency programs.

Medicaid Funding

A state's Medicaid rules can provide funding for in-home services via federally approved waivers and amendments to state plans. Negotiations with the Managed Care Organizations (MCOs) that serve Medicaid populations in most states can also lead to funding and support. MCO contract changes can be promoted at the state administrative level, or through partnerships with MCOs directly.¹

Has Michigan had any related waiver programs?	Yes: Flint Michigan Demonstration enables a demonstration project that supports residents of Flint, including home lead investigation services and home visits
Has Michigan had any related State Plan Amendments?	Yes: SPA 20-0008 implements new federal regulations to permit non-physician practitioners to order home health aide services and durable medical equipment
Does Michigan contract with MCOs?	Yes (see list of MCOs by state)

State Children's Health Insurance Program (CHIP) Health Services Initiatives (HSIs).

Unused CHIP funds can be invested in health-related programs known as Health Services Initiatives (HSIs). An HSI can be proposed by a state's CHIP administrator.

¹ See ACEEE's May 2020 report for more background on these funding mechanisms, and for key program examples (Hayes, S. and C. Gerbode. 2020. *Braiding Energy and Health Funding for In-Home Programs: Federal Funding Opportunities*. Washington, DC: ACEEE. www.aceee.org/research-report/h2002.)

Does Michigan have unused funds for an HSI? ²	None identified
Does Michigan have a related HSI?	Yes: lead testing, prevention, & abatement services allows for home visits and alterations to reduce hazards, and the Michigan Regional Poison Control Center (MRPCC) provides 24-hour emergency treatment and advice, with the potential of in-home exposure assessments

Opportunities for Action in Michigan

Medicaid and CHIP are frequently administered through the same state agency or office. Connect with this office to learn about the potential to implement changes to Medicaid reimbursement, to develop an HSI, or to alter MCO contracts to support energy efficiency or related in-home health and safety work.

What office administers Medicaid in Michigan?	Medicaid Michigan Department of Community Health

Leverage Health in All Policies (HiAP) initiatives or advocate for new ones

Health in All Policies is a collaborative approach to integrate health considerations into policymaking across sectors.³ HiAP initiatives, whether implemented as legislation, an executive order, an agency rule, a task force, or otherwise, can bring a focus on health in areas of governance not used to prioritizing health issues. These initiatives can help motivate, justify, and facilitate better integration of health considerations with other types of work, including energy policies and programs. If your state (or a local community within your state) has already adopted a HiAP approach, it could be used to facilitate collaborative conversations between health and energy policymakers. There may be an opportunity to advocate for a HiAP policy in states that don't already have one in place.

Does Michigan have a statewide Health in All Policies mechanism in place?	None identified
---	-----------------

Reach out to ACEEE's Health and Environment Program at health@aceee.org for additional details and information on the status of the above policies or mechanisms in Michigan, and to learn about other resources to support policy advocacy in this area.
