

Opportunities to Provide Home Energy Services with New Health Funding in Missouri

Health care professionals recognize that avoiding a health harm is preferable to treating an illness or injury after it has occurred. Energy efficiency programs provide an opportunity to deliver these preventive strategies in homes. This fact sheet provides information on several opportunities for health sector funding to be used in support of in-home energy efficiency programs.

Medicaid Funding

A state's Medicaid rules can provide funding for in-home services via federally approved waivers and amendments to state plans. Negotiations with the Managed Care Organizations (MCOs) that serve Medicaid populations in most states can also lead to funding and support. MCO contract changes can be promoted at the state administrative level, or through partnerships with MCOs directly.¹

Has Missouri had any related waiver programs?	None identified
Has Missouri had any related State Plan Amendments?	Yes: SPA 16-0004 adds asthma education and in-home environmental assessments, two times per year, for patients with uncontrolled asthma; SPA 18-0016 removes the requirement of the need for a skilled service to receive home aide services and will cover home health care ordered by a physician as part of a written Plan of Care certifying the need for home health services; and SPA 20-0016 allows advanced practice registered nurses and physician assistants to order home health services and conduct face-to-face visits
Does Missouri contract with MCOs?	Yes (see list of MCOs by state)

State Children's Health Insurance Program (CHIP) Health Services Initiatives (HSIs).

Unused CHIP funds can be invested in health-related programs known as Health Services Initiatives (HSIs). An HSI can be proposed by a state's CHIP administrator.

¹ See ACEEE's May 2020 report for more background on these funding mechanisms, and for key program examples (Hayes, S. and C. Gerbode. 2020. *Braiding Energy and Health Funding for In-Home Programs: Federal Funding Opportunities*. Washington, DC: ACEEE. www.aceee.org/research-report/h2002.)

Does Missouri have unused funds for an HSI? ²	Yes: \$28.6 million
Does Missouri have a related HSI?	Yes: lead testing, prevention, & abatement services include educating families and monitoring families and homes, and newborn home visiting programs are designed for high-risk families

Opportunities for Action in Missouri

Medicaid and CHIP are frequently administered through the same state agency or office. Connect with this office to learn about the potential to implement changes to Medicaid reimbursement, to develop an HSI, or to alter MCO contracts to support energy efficiency or related in-home health and safety work.

What office administers Medicaid in Missouri?	MO HealthNet Division Department of Social Services

Leverage Health in All Policies (HiAP) initiatives or advocate for new ones

Health in All Policies is a collaborative approach to integrate health considerations into policymaking across sectors.³ HiAP initiatives, whether implemented as legislation, an executive order, an agency rule, a task force, or otherwise, can bring a focus on health in areas of governance not used to prioritizing health issues. These initiatives can help motivate, justify, and facilitate better integration of health considerations with other types of work, including energy policies and programs. If your state (or a local community within your state) has already adopted a HiAP approach, it could be used to facilitate collaborative conversations between health and energy policymakers. There may be an opportunity to advocate for a HiAP policy in states that don't already have one in place.

Does Missouri have a statewide Health in All Policies mechanism in place?	None identified
---	-----------------

Reach out to ACEEE's Health and Environment Program at health@aceee.org for additional details and information on the status of the above policies or mechanisms in Missouri, and to learn about other resources to support policy advocacy in this area.
