#### Residential Demand Response Program Opportunities in the Texas Deregulated Market

### Wi-Fi Enabled Thermostats

#### **Texas Deregulated Electricity Market**

# **Competitive Rules - TDUs**

- Energy efficiency 30% of average load growth
- No competitive services
- Use 3<sup>rd</sup> parties to provide energy efficiency services
- Remain market neutral

### **Residential Market Enablers**

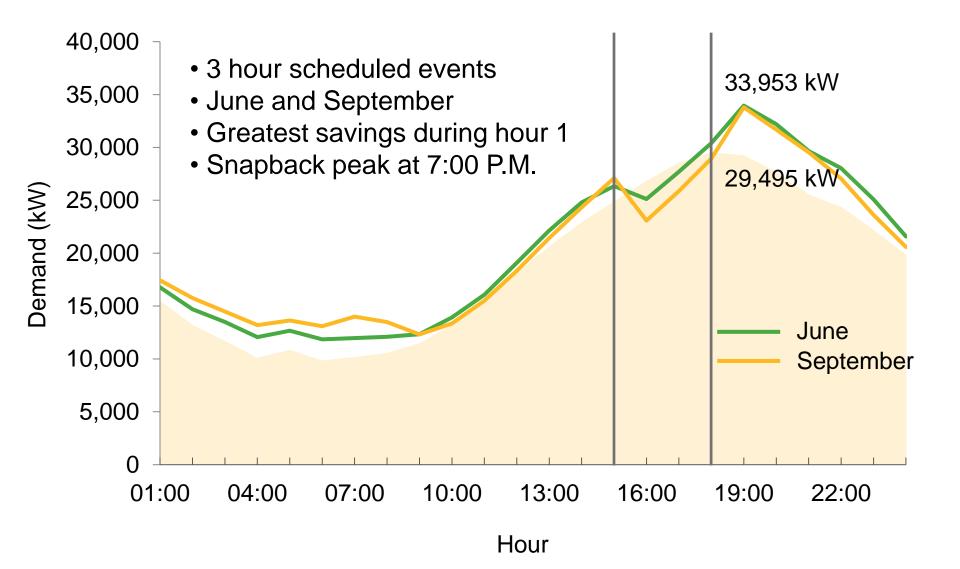

# **RDR Pilot Program**

- Can we retrieve and analyze the data?
- How do we measure savings?
- The program should be scalable to meet energy efficiency portfolio needs
- Cost effective
- Deploy only during ERCOT EEA Level 2 grid emergency

#### AMI Data Management

# Portfolio Results

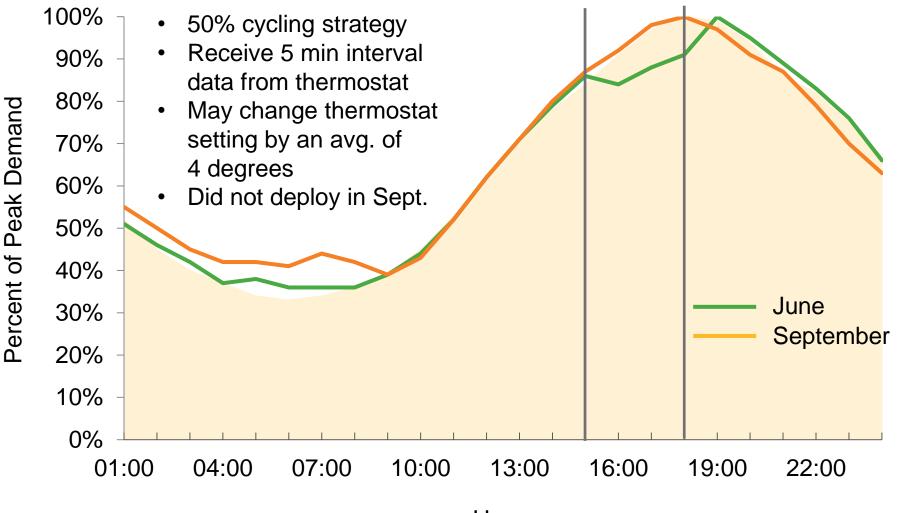

#### Portfolio Results

Year	Participants	Customers	Reported Savings (kW)	Average kW / Customer
2015	1	3,960	6,886	1.72
2016	4	6,958	4,775	0.69

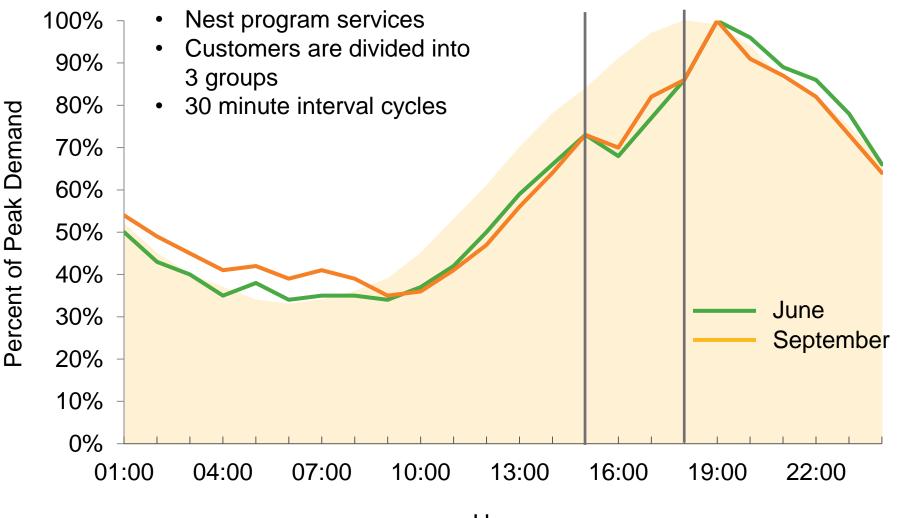

Hour

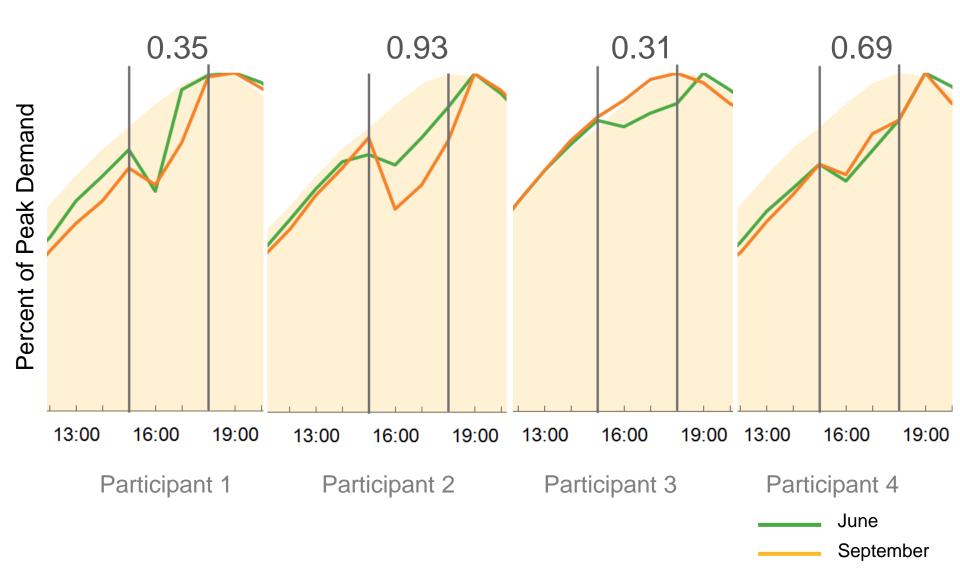

Hour

Hour

#### Participant Performance kW /customer

#### Lessons Learned

#### Performance

- Participants with active thermostat management programs have better results
- Event timing and duration has an impact on overall performance and creates a secondary peak
- Methods to manage deployment issues

#### Internal capabilities

- Processes to manage AMI data anomalies
- Software and analytic capabilities for large datasets

# Where are We Going?

- Move from Pilot to Standard Offer Program in 2017
- Expand program to 20,000 customers
- Increase analytic capabilities

#### **Opportunities**

- Evaluate potential annual energy savings for actively managed thermostats?
- Add devices such as water heating and pool pumps?
- Feeder level demand response?

# Thank You!

Garry Jones Manager, Energy Efficiency garry.jones@oncor.com 214-486-5350
