

Trading Space I – Monday, December 5

Organization	Presenter Name	Trading Space Pitch
Agilis Energy	Margaret Hirl	Agilis Energy is an energy management and technology company focused on helping small to large commercial and industrial customers understand their energy usage and develop plans to effectively and economically reduce consumption. The Agilis Approach is facilitated using patented and proprietary software that uses “smart meter” data as it input and through extensive processing, pattern recognition and image visualization provide insights into the “internals” of a building and its energy use behavior over a wide range of conditions. Agilis has used its technology to drive annual energy savings of 10 to 25% at more than 3000 facilities across North and South American, Europe, the Middle East and Asia Pacific with little or no capital investment.
EnergySavvy	Tim Guiterman	EnergySavvy offers utilities a breakthrough solution for customer experience and operations through cloud software. Our Customer Operations products empower utilities with real-time analytics, and program managers with increased visibility into program activity and performance. We are looking for utilities to partner together on innovative M&V 2.0 and Program Optimization pilots/projects
NEEP	Claire Miziolek	
Verdant	Michael Seour	Energy efficiency in the hospitality sector is very challenging. Verdant Environmental Technologies addresses this with its energy management thermostat system, a product and service that can be found in over 1,000 hospitality properties across North America. Verdant is interested in working with efficiency program developers and administrators that are seeking energy efficiency resources from the hospitality sector.
