

## **Panel 14: Poster Display Presentations**

This panel utilizes various media, including videos, posters, software programs, and other graphical displays, to tell the story of how your work contributes to a better energy future.

The panel seeks content related to building energy savings across all sectors and fuel types. The panel encourages submissions addressing design, construction, or operations, and aims to span the spectrum of building sizes and functions.

The panel encourages submissions with rich visuals and graphics, offering presenters an opportunity to engage with conference attendees in one-on-one or small group discussions, thereby promoting in-depth conversations about the presenters' work.

We value interdisciplinary perspectives and strongly encourage researchers and practitioners from various backgrounds to take this opportunity to exchange their ideas and experiences with conference attendees at the poster session.
